

PRESIDENT TRUMP'S ASSAULT ON THE CALIFORNIA COAST

31% cut to the EPA

The EPA directly supports wetland restoration through state grants and the National Estuary Programs, both of which face deep cuts or complete elimination.

50% cut to EPA's Office of Research and Development

The science arm of the EPA provides the foundation to safeguard human health from pollutants, and is advancing the science of ecosystem monitoring along the California coast.

17% cut to NOAA budget

NOAA funds California's coastal zone management program and the National Estuarine Research Reserves System. Eliminating NOAA's core state grants programs when California and all other coastal states are at increasing risk from sea level rise endangers the economy, coastline, and quality of life for millions of residents.

Elimination of NOAA's Sea Grant program

The National Sea Grant Program is an incredibly successful training ground for scientists and applies scientific research from universities to coastal management issues.

Scrapping the Clean Power Plan

The Clean Power Plan was designed to regulate greenhouse gas emissions from coal-fired power plants. Without this framework, climate change will accelerate, with devastating impacts to coastal resources and communities.

12% cut to the Department of the Interior

The Department of the Interior manages the National Park Service and the 13 National Wildlife Refuges along the California coast. Cuts to these programs undermine the protection of our recreational spaces and sealife.
