

Exhibit F(3). Site of Proposed Parking Area. The vast majority of the site is currently covered with invasive exotic plants including Spanish and French broom and Purple thistle. Native trees will be retained as a natural vegetative screen for the parking area. Native shrubs and trees will be planted as part of the parking area's landscaping.

Exhibit F(4). Proposed Parking Area with Driveway Looking North. The existing fire road seen to the right of the picture will be converted into the driveway for the proposed parking area. A tall canopy of native mixed-evergreen trees screens views of the proposed parking area from the rest of the preserve. The driveway will parallel Skyline Boulevard for a few hundred feet and then turn towards the highway and exit at a location deemed with an adequate line of sight.
