

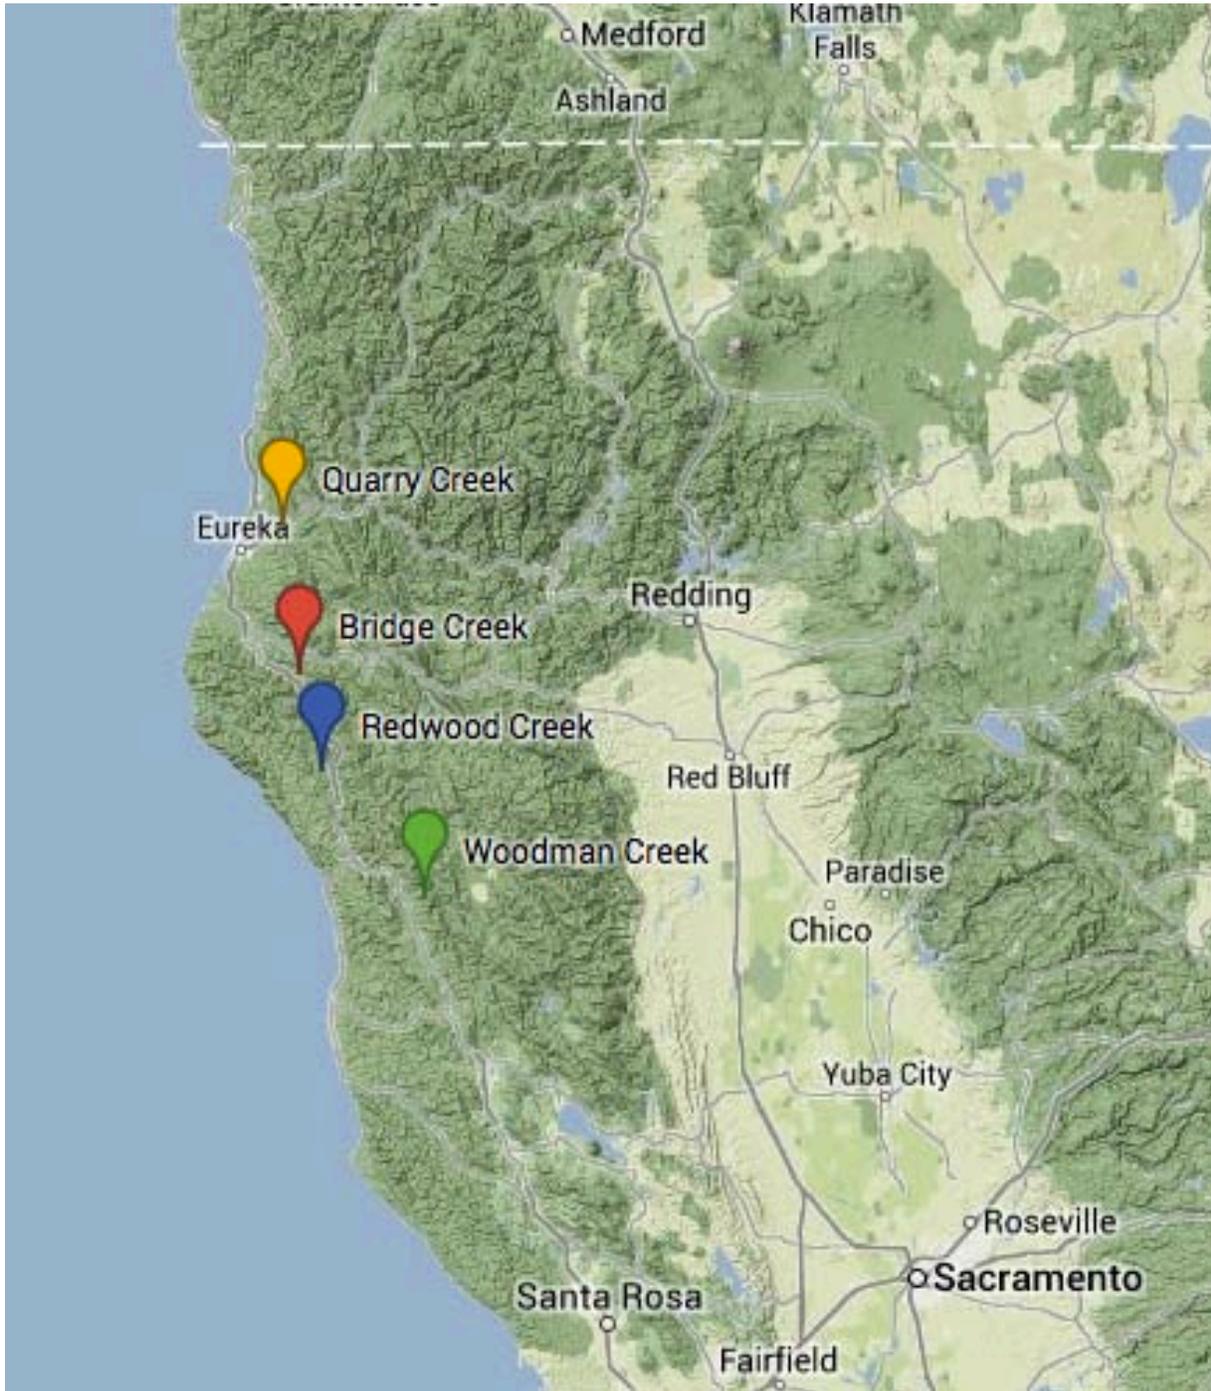

Exhibit 1: Project Locations Site Maps and Graphics

Quarry Creek

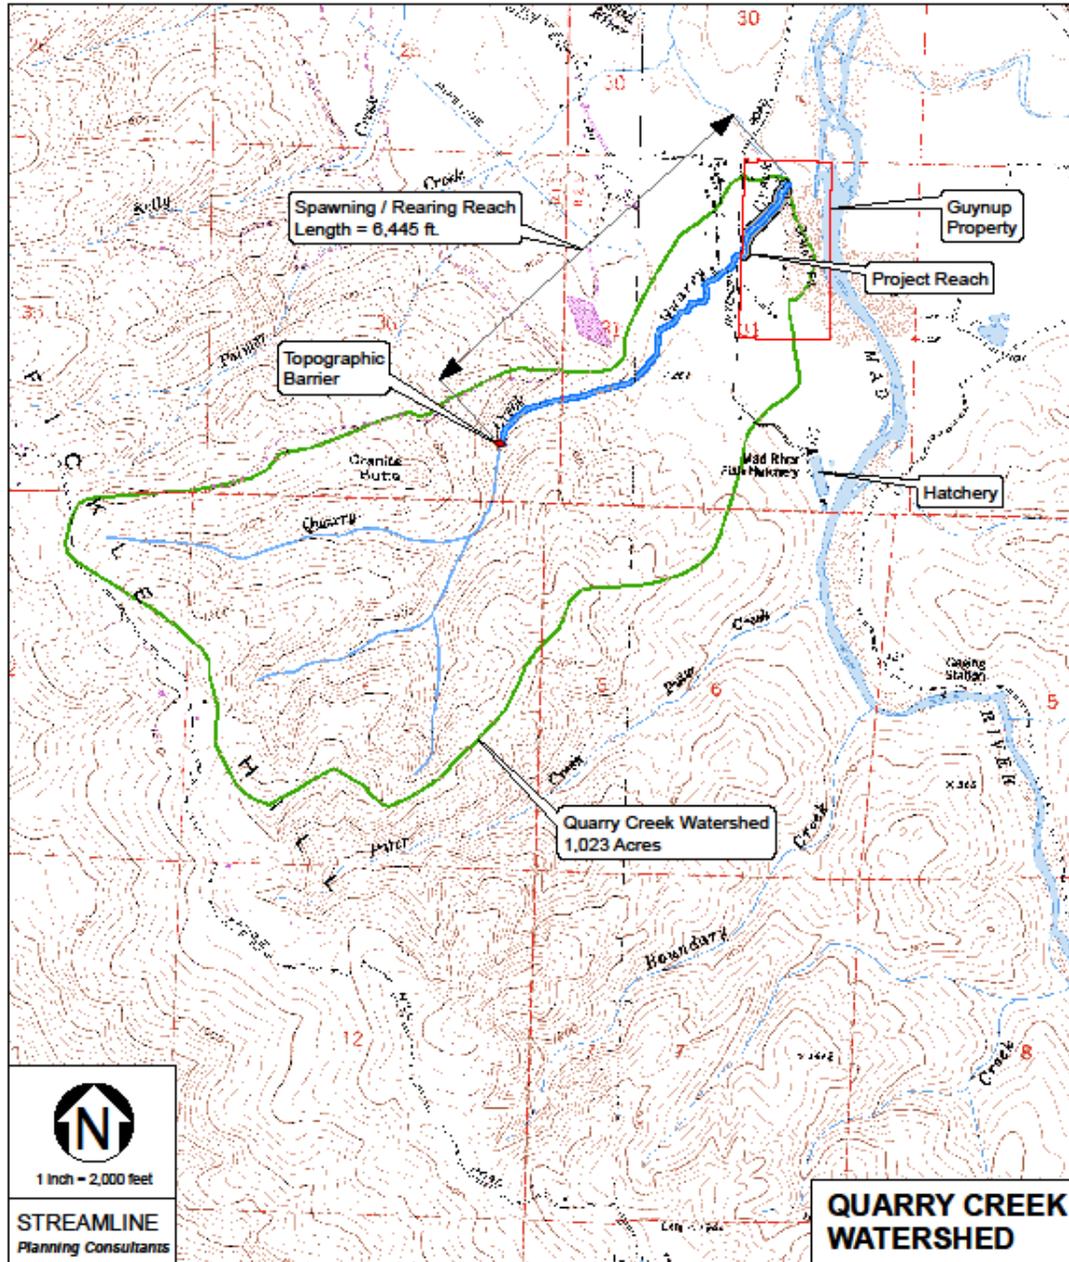

Exhibit 1: Project Locations and Graphics

Bridge Creek

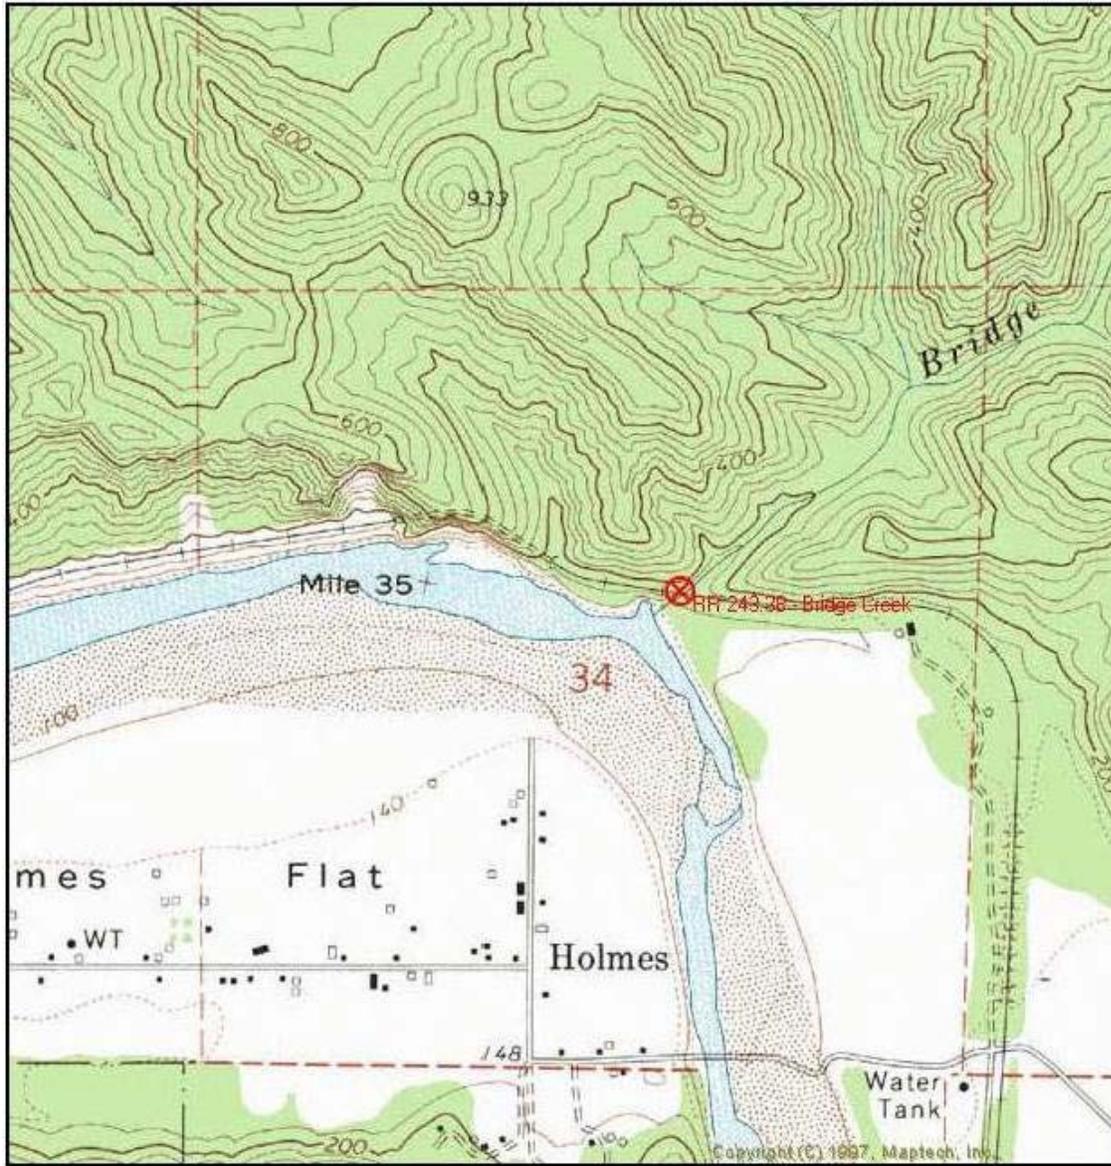

Exhibit 1: Project Locations and Graphics

Bridge Creek two-stage culvert outlet, located approximately 450 ft upstream of the Eel River.

The Bridge Creek culvert inlet, consisting of retro-fitted vertical standpipes almost completely plugged by wood and sediment debris.

Exhibit 1: Project Locations and Graphics

Redwood Creek

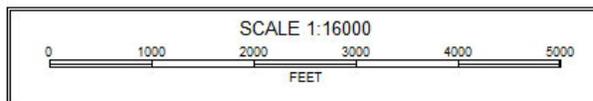

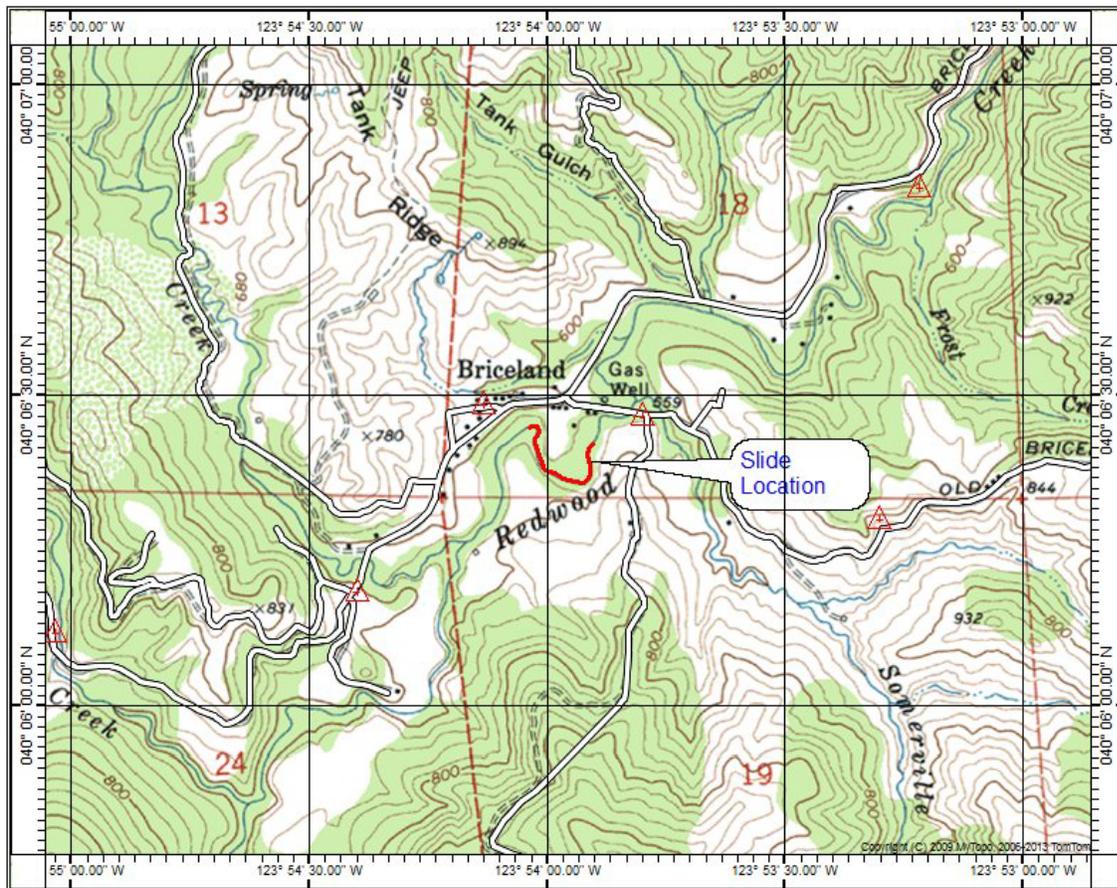

Exhibit 1: Project Locations and Graphics

Redwood Creek: Looking downstream at the slide blocking the channel of Redwood Creek. New channel would be constructed approximately 20 feet to the left of the existing left bank. New channel would begin just upstream of the person in the photo.

Woodman Creek

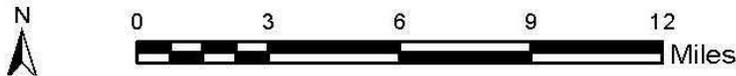

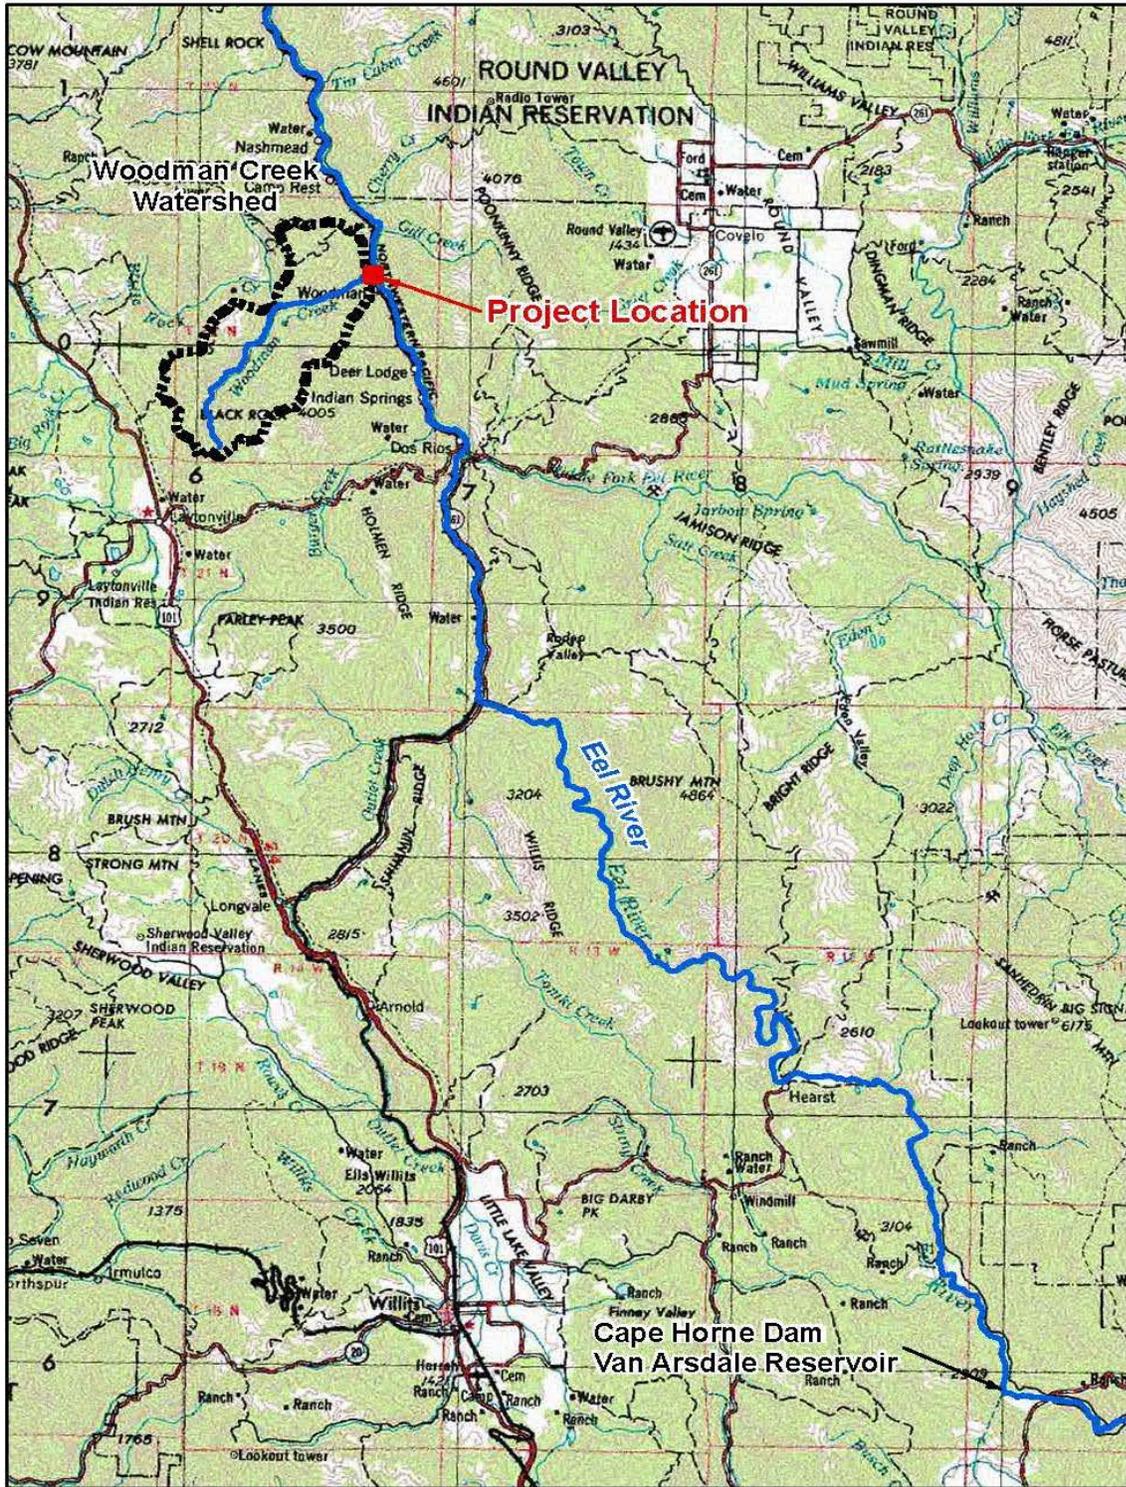

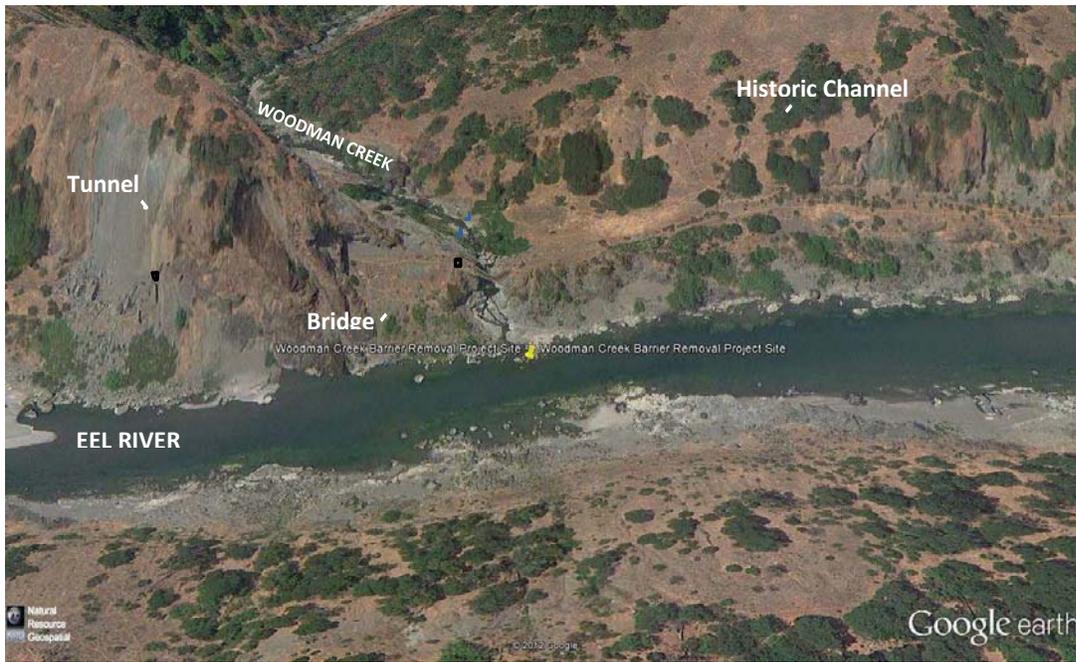

Exhibit 1: Project Locations and Graphics

Presumed historic location of Woodman Creek channel confluence with the Eel River: the swath of vegetation between the exposed bedrock to the left and exposed grassy hillside.

Exhibit 1: Project Locations and Graphics

Old fishway at Woodman Creek barrier cascade. The standing water at the bottom of the photo is the Eel River water surface.
