Potential Restoration Elements

- Floodplain excavation areas
- Bank "feathering" areas
- Alcoves
- Rip-rap removal areas
- Roughness feature (LWD + rock)
- Incision reversal structures (rock)

Notes:
1. Refer to accompanying text document for description, goals, and objectives for structures.
2. Remove imported fill from upstream floodplain excavation area.
3. Reuse rip-rap for incision reversal structures.
4. Reduce flood risk to adjacent community.
5. Consider additional opportunities as adjacent lands become available for planning.
